

Questions for lesson 5

Question 1

There are various helper methods built into the Razor engine for helping you to build HTML forms. These helpers are divided in different types of helpers. Give the name of these helper types.

Question 2

Which *Input HTML Helper* methods do you have?

Question 3

What would you prefer to use in a project, *Input HTML Helpers* or *Strongly Typed Input HTML Helpers*?

Question 4

Give two examples of how the *Templated HTML Helpers* work, and demonstrate the effect of decorating properties in you class with Data annotation attributes.
